## Задание

Для заданного набора данных проведите корреляционный анализ. В случае наличия пропусков в данных удалите строки или колонки, содержащие пропуски. Сделайте выводы о возможности построения моделей машинного обучения и о возможном вкладе признаков в модель.

## Код и результаты выполнения

### 1. Подключим библиотеки:

```
import pandas as pd
import sklearn
import numpy as np
from sklearn.datasets import load_boston
import matplotlib.pyplot as plt
import seaborn as sns
```

### 2. Подготовим данные

```
boston = load_boston()
```

```
print(boston.data.shape)
```

```
(506, 13)
```

```
data = pd.DataFrame(boston.data)
```

```
data.isnull().sum()
0    0
1    0
2    0
3    0
4    0
5    0
6    0
7    0
8    0
9    0
10   0
11   0
12   0
dtype: int64
```

### 3. Основные статистические характеристики набора данных
